## HAND MADE PAPER

Pure Fiji initiated the handmade paper project in Fiji to provide an income to villagers in isolated regions. Beautiful handmade paper is made from cellulose found in plant fiber, which is literally beaten to a pulp and dispersed in water. This fiber, the main ingredient of paper, is sourced in different forms from bark, leaf, and grass of local plants and trees. Pure Fiji uses the paper for packaging soaps and in the production of exquisite stationary items.

Pure Fiji's paper-making project is almost entirely run by the women of these rural communities, empowering them in ways they have never experienced before.
